

Earth Energies SIG

Visit to Uley Long Barrow Saturday 20th June 2026

Visit Report

Introduction

This was the second outing for the newly formed Earth Energies group, and 9 of us managed to meet up on a warm, but slightly overcast afternoon. Five of the group decided to walk to the site from Coaley Peak car park, a short distance away, whilst the remaining four chose to drive to the lay-by opposite to the site entrance. Unfortunately, the walkers, guided by Lawrence, took a wrong turn and found themselves descending the escarpment on the Cotswold way. Eventually retracing their footsteps, they managed to find the site but had at least enjoyed a pleasant walk amongst the trees. The only downside was less time spent at the actual site.

The findings from the visit received so far are summarised below. Also included are any findings made via remote dowsing by those unable to be with us on the day.

Findings

Around the Barrow

A few energy lines either side of the barrow

On top of the barrow

1. At SO 789600035, energy lines crossing N – S and E – W directions. This E – W line seemed to point to and connect with the Littledean Roman Temple in the westerly direction, and with another Roman temple located the other side of the road in the Easterly direction. Corroborated by more than one person
2. At the crossing point above, a strong vortex of energy counterclockwise. Dowsing indicated a stream flowing in an E -W direction. This was corroborated by more than one person.
3. At SO 7895300033, a few paces back from the above grid reference in a SW direction, energy lines crossing in S W and N E directions. The S W line seemed to point to and connect with Downham Hill. Corroborated by more than one person.
4. At the crossing point above in 3., a strong vortex of energy counterclockwise. Dowsing indicated a stream flowing in a N - S direction.

Inside the barrow

A node was located. Dowsing indicated that it was spirit lines crossing, and there was something valid and beneficial, and for that person's highest good, which produced a vigorous spinning of the pendulum. Dowsing whether a download was being received was also confirmed, but whether they were to know what was downloaded received a negative response.

Also, a wonderful photograph of the inside was provided by Jonathan which is an attachment to this report.

In the field adjacent to the Long Barrow

There was only enough time for a brief visit to this area on our return to the lay-by. However, a circular area was located at which one or two people could feel warmth rising from the ground. Dowsing indicated that this was a cosmic connection with the energy flowing counterclockwise into the earth. A suggestion was made that the connection was with Vega, a blue, white star in the constellation of Lyra. This was corroborated.

After our visit one member of our party had consulted a 1903 OS map of this area which showed that there had been a quarry in the vicinity of this area.

General Comments

This was a fertility site, picked up by more than one person. A benevolent place to be. Good vibrations, good energy, and good acoustics, A feeling of deep peace from the barrow.

There is an energy line, electromagnetic? In E – W direction, with another line at right angles. Entrance is facing east.

Giants involved, a Guardian Giant, also Middle Eastern people and elongated heads 10,000BC. Not used as a burial site until 4,000BC

Stones not local. Ying energy.

A portal. Healing and education. Connected to Cam Peak Barrow.

Seemed to be a triplicity of protectors of indeterminate sex perhaps connected to the Cucullati, the three small protectors associated with a local earth cult or Cuda. Detected by more than one person.

Conclusions

So far, less feedback on visit compared to Cam Peak. However, the feedback received covers a wide range of information and would merit a return visit at some time to confirm and corroborate our understanding of the site.

Postscript

I measured the Bovis Energy units at the site prior to our visit, then again afterwards. In a similar manner to Cam Peak the energy increased from 8K units (person in fair health) to 29K units (Star Sirius). However, this information really needs to be corroborated!

Also, a comment received regarding three very old springs across the road and down into the wooded valley. Perhaps the oldest part of the area.

Regarding the Roman temple also across the road and mentioned in the report, this is the West Hill Romano Celtic site from early 4th century AD. This religious complex yielded the head of its titular god of Mercury “one of the most important Roman sculptures to be found in Britain” (The Times).
